Acoustic *Walls*

Solving acoustic challenges in small and narrow spaces can be challenging with most of the floor occupied by other furniture. In such spaces, acoustic wall panels are an effective solution. We offer an extensive range of standard and bespoke products to spark your creativity and endless imagination – in both small and big spaces. Now completely glue-free.

Acoustic *Curtain System*

Our ARCHISONIC® Textile based room-in-room solution creates flexible and adaptable environments. Noren champions sustainability with recycled and reusable materials and is based on the principles of circular design. Each product provides access to a digital product passport, which ensures complete transparency and traceability. The acoustic curtain offers numerous colour options and, thanks to a take-back programme, opens up a profitable path to a circular economy for businesses.

Acoustic *Shading*

Our Acoustic Shading systems redefine spatial dynamics by merging visual elegance with acoustic performance. Combining retractable elements with precise control, they allow effortless transitions between openness and privacy, collaboration and focus. The vertically suspended lamellas are flexibly adjustable, available in 36 curated colours. As a contemporary reinterpretation of the classic vertical blind – whether used in open spaces or at the window – they combine spatial and acoustic zoning with effective glare and privacy control. A future-ready solution for dynamic and versatile interiors.

Acoustic *Desk Dividers*

Acoustic partitions for desks should not be missing in any office. Especially in open-plan offices, they give a bit of privacy and muffle telephone conversations. All products can also be produced with your individual size or perforation on request. The lightweight of our material makes the dividers especially attractive for desks with a motor.

One collection. Eight colour families. Unlimited possibilities.

This colour collection is created in partnership with Colour Hive with an understanding of developing and enduring colour trends, each with a story to tell.

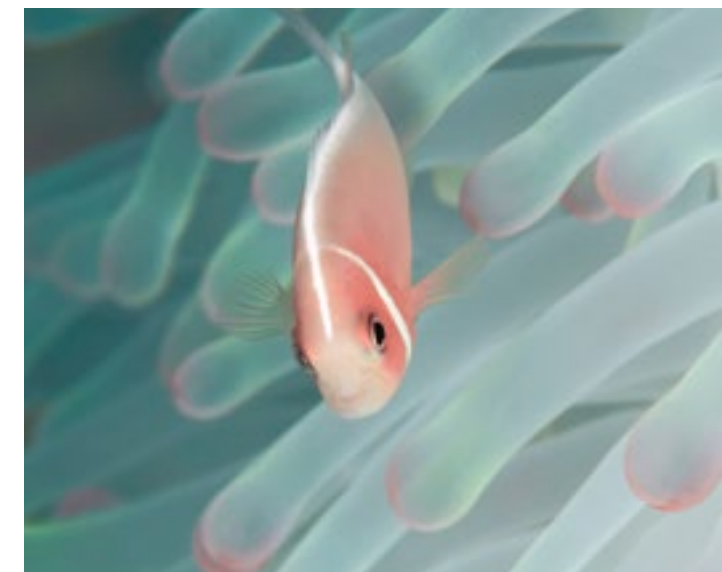

ARCHISONIC®

Pioneering *sustainability* and acoustics.

The building sector is the world's largest single source of energy-related greenhouse gas emissions. Half of the energy consumed in the construction of new buildings is used for the production of materials and products.

For us, waste is a crime. Sustainable indoor acoustic products can be a simple first step in making a much-needed change. That's why we developed ARCHISONIC®, arguably the most flexible and high-performing acoustic material on the market. Made from recycled PET bottles.

The entire ARCHISONIC® product range is LEED and Cradle to Cradle™ certified. Due to its flexible applications, it offers the design and architectural community limitless possibilities for addressing acoustic challenges.

● ARCHISONIC® Cotton 24mm

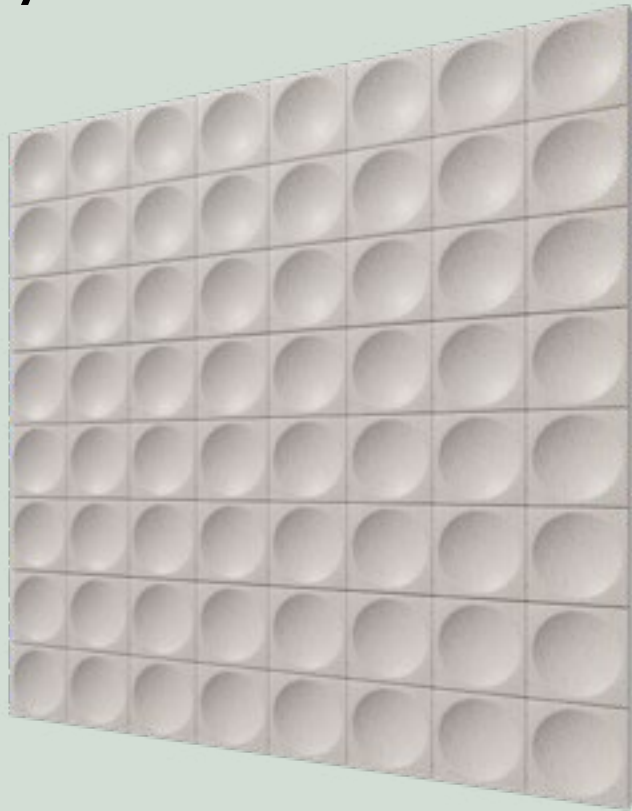

The graph represents the sound absorption coefficients (α_s) in the third octave band center frequencies. Measurement used Pink Noise as excitation signal in a reverberant room

ARCHISONIC® *Mycelium*

Born from the quiet intelligence of fungi, Mycelium redefines the relationship between sound, sustainability, and space. Each tile is cultivated, not made: Grown in Switzerland from reclaimed agricultural resources and nurtured into a form that embodies circularity from its very first breath.
